Youtube videom:

https://www.youtube.com/watch?v=DFB3MyX6AXQ&ab_channel=SelcanNarin

Kaynak kodları:

https://github.com/Sels-n/MagazaOtomasyonu

Uygulama Tanımı:

Uygulamam bir mağazadaki ürünlerin, stoklarının, kategorilerinin, siparişlerin, müşterilerin ve kategorilerin yöneticilerinin bilgilerinin tutulduğu veri tabanından bilgilerini çekerek onları listelememizi, güncelleme, ekleme, silme ve arama yapmamızı sağlayan bir mağaza kontrol sistemidir.

İş Kuralları:

- -Bir ürünün bir id' si, adı, kategorisi, fiyatı, markası ve tedarikçisi vardır.
- -Her ürünün bir birim kazancı vardır. Birim kazanç satış fiyatından alış fiyatını ve kdvli halini çıkarılıp elde edilir.
- -Her ürünün bir stok bilgisi vardır. Stok adeti 50' den az olanların stok durumu "tedarik edilmeli" 50'ye eşit veya fazla olanların ise "stok yeterli" dir.
- -Stoku azalanlar tedarik edilmesi için yedeklenir.
- -Her kategorinin çok sayıda ürünü vardır.
- -Her kategorinin bir kdv oranı vardır.
- -Bir kategorinin çok yöneticisi olabilir.
- -Yöneticilerin nosu, adı ve soyadı kaydedilir.
- -Bir üründen çok kez sipariş verilebilir.
- -Bir siparişte çok sayıda ürün olabilir.
- -Her ürün sipariş verildiğinde stok sayısı azalır.
- -Bir siparişi bir müşteri sipariş edebilir.
- -Bir müşteri çok sayıda sipariş verebilir.

- -Her siparişin faturası, kargo firması ve alınan ürün adetine göre hesaplanan tutarı vardır.
- -Her müşterinin nosu, adı, soyadı, teli ve yaşadığı il kaydedilir.

İlişkisel Şema:

Urun(urunid int, ad varchar, fiyat int, kategori int, marka int, tedarikçi int)

Marka(markakod int, ad varchar)

Tedarikci(**tedarikno int**, ad varchar, tel int)

Birim kazanc(**urunid int**, alis fiyati int, birimkazanc double)

Stok_bilgisi(urun_id int, stok_adet int, stok_durumu varchar)

Stok_azalanlar(**urun_id int**, stok_adet int, stok_durumu varchar)

Kategori(kategori_id int, kategori ad varchar)

Kdv_degeri(kdv_orani double, kategori_id int)

Yonetici(yönetici_id int, ad varchar, soyad varchar, kategori_id int)

Siparis_urun(kayit_no int, siparis_no int, urun_id int, urun_adet int)

Siparis(siparis_no int, müşteri no int, tutar int, kargo firmasi int)

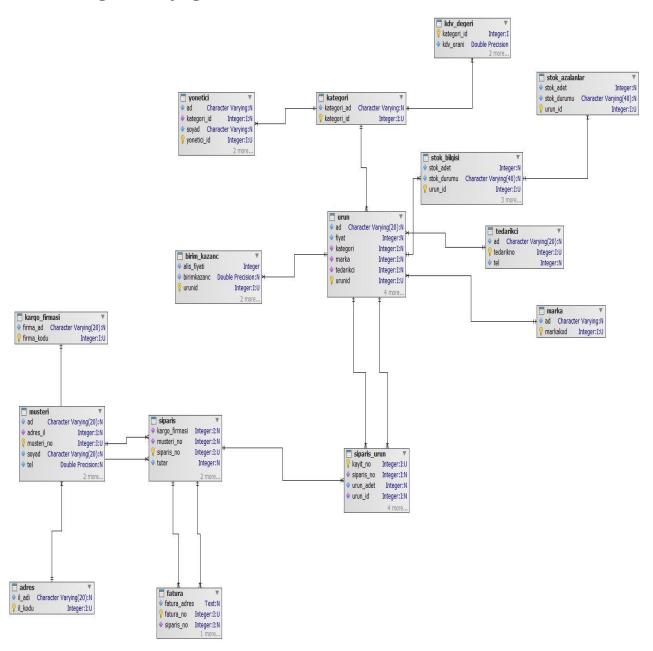

Fatura(fatura_no int, fatura_adres text, sipariş_no int)

Kargo firmasi(firma kodu int, firma ad varchar)

Musteri(müşteri_no int, ad varchar, soyad varchar, tel double, adres il int)

Adres(**il_kodu int**, il adi varchar)

Varlık Bağıntı Diyagramı:

Fonksiyonlar ve Triggerlar:
1) Kategoriyi parametre alarak kdv oranını bulan fonksiyon:
CREATE FUNCTION public.kdvoranibul(kategoriid integer) RETURNS TABLE(kdvorani double precision)
  LANGUAGE plpgsql
  AS $$
BEGIN
  return query
        SELECT kdv_orani FROM kdv_degeri WHERE "kategoriid" = kategori_id;
END; $$;
2) Kdv oranına ve fiyata bağlı olarak kdvli fiyatı listeleyen fonksiyon:
CREATE FUNCTION public.kdvli(fiyat double precision, kdvorani double precision) RETURNS double precision
  LANGUAGE plpgsql
  AS $$
declare
kdvlifiyat float;
begin
kdvlifiyat:=fiyat*kdvorani+fiyat;
return kdvlifiyat;
end;
$$;
3) Kdv fonksiyonunu da kullanarak her ürünün birim kazancını hesaplayan fonksiyon:
CREATE FUNCTION public.birimkazanc_hesapla(urun_id integer, alisfiyat double precision, fiyat double
precision)
RETURNS TABLE(birim_kazanc double precision)
  LANGUAGE plpgsql
  AS $$
declare kdvorani float;
```

```
kategoriid int;
BEGIN
        kategoriid:=(SELECT urun.kategori FROM "urun" where "urun_id" = urunid );
        kdvorani:=(select* from kdvoranibul(kategoriid));
        update birim_kazanc set birimkazanc=(fiyat-(alisfiyat+kdvorani*fiyat)) where
birim_kazanc.urunid=urun_id;
        return query
        SELECT birimkazanc FROM birim_kazanc
        WHERE "urun_id" = urunid;
END;
$$;
4)Stoku azalan ürünleri tespit etmek için kullanılan fonksiyon:
create or replace function stokAzalanUrunler()
returns table
(
        urunid int,
        stokadet int
)
as $$
begin
return Query
SELECT urun_id,stok_adet FROM public.stok_bilgisi where stok_adet<50
ORDER BY urun_id ASC;
end;
$$
language plpgsql;
Triggerlar:
1) Stok adetine göre stok durumunu otomatik giren trigger:
create or replace function stokdurumu()
returns trigger
as
$$
```

```
begin
IF NEW.stok_adet >=50 THEN
NEW.stok_durumu = 'Stok yeterli';
else
NEW.stok_durumu = 'Tedarik edilmeli';
end if;
return new;
end;
$$
LANGUAGE plpgsql;
CREATE TRIGGER updte_stok
 BEFORE INSERT or UPDATE
 ON stok_bilgisi
 FOR EACH ROW
 EXECUTE PROCEDURE stokdurumu();
2) Sipariş oluşturulunca otomatik olarak fatura oluşturan trigger:
CREATE OR REPLACE FUNCTION fatura_olusturma()
 RETURNS trigger AS
$$
BEGIN
INSERT into fatura VALUES (new.siparis_no,' ',new.siparis_no);
RETURN NEW;
END;
$$
LANGUAGE 'plpgsql';
CREATE TRIGGER fatura_olustur
 AFTER insert
 ON siparis
 FOR EACH ROW
 EXECUTE PROCEDURE fatura_olusturma();
```

```
3)Sipariş girildiğinde alınan ürün kadar üründen stok azaltan trigger:
create or replace function stok_sayac()
returns trigger
language plpgsql
as
$$
begin
update stok_bilgisi set stok_adet = (stok_adet-new.urun_adet);
return new;
end;
$$
 create trigger stok_eksilt
 after insert or update on siparis_urun
 for each row
 execute procedure stok_sayac();
4) Sipariş tablomdaki alınan ürün adetine ve fiyatına göre siparişin tutarını hesaplayan trigger:
CREATE OR REPLACE FUNCTION tutar_hesaplama()
 RETURNS trigger
 language plpgsql
 AS
$$
declare urunfiyat float;
         fiyati float;
BEGIN
fiyati:=(SELECT urun.fiyat FROM "urun" where urun.urunid=new.urun_id);
urunfiyat:=fiyati* new.urun_adet;
update siparis set tutar = urunfiyat where siparis_no=new.siparis_no;
RETURN NEW;
END;
$$;
CREATE TRIGGER tutar_hesapla
before insert or update
 ON siparis_urun
```

FOR EACH ROW

EXECUTE PROCEDURE tutar_hesaplama();

5) CREATE OR REPLACE FUNCTION siparis_urun_olusturma()

RETURNS trigger AS

\$\$

BEGIN

INSERT into siparis_urun (kayit_no,siparis_no) VALUES (new.siparis_no,new.siparis_no);

RETURN NEW;

END;

\$\$

LANGUAGE 'plpgsql';

CREATE TRIGGER tablo_olustur

AFTER insert

ON siparis

FOR EACH ROW

EXECUTE PROCEDURE siparis_urun_olusturma();
